Transcript of audio file:
Hello, this is dr. Lugo, I understand that you are calling because your child has a cough, congestion or stuffy nose. If your child has any of the following high risk factors i recommend coming to the emergency room. If your child has any difficulty breathing noted by fast breathing, hard breathing with chest or stomach going in and out hard please come directly to the hospital. If they look blue, gray or very pale ...
If none of the above exist please provide supportive home care and call the office in the morning. Home care i like to recommend is
saline nose drops 1-2 drops each nostril three times a day. Cool mist humidifier at night.

I understood the above information
